

# Programat<sup>®</sup> app

Total control at your fingertips with the Programat<sup>®</sup> app

**NEW:** with many additional features

# Programat® app

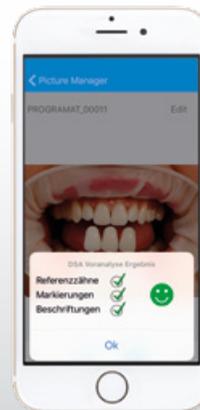

Total control at your fingertips with the Programat® app

The app offers users of the newest Programat® generation (xx10) the possibility to communicate with their furnace through a WLAN connection. Status display, diagnostic tools, messenger function, DSA image analysis, picture manager, image data transmission via WiFi are only a few keywords for the added value that the new app offers.

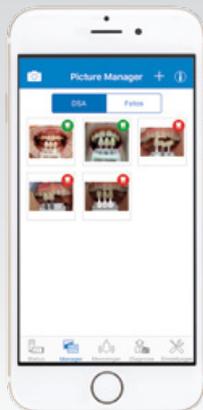

## Status display

With the status display, you can follow up on the progress of the current firing program. By turning the smart phone, a coloured firing curve is displayed.

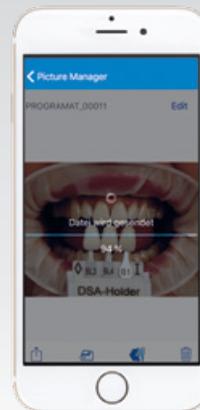

## Verification function for DSA image analysis

This feature checks whether all the necessary requirements for the DSA analysis are met in the photo. If this is the case, a positive acknowledgement appears on the display. Then you can send the image to the furnace for DSA analysis.

## Picture Manager for image management

With the Picture Manager, you can manage your images easily. You can save the DSA photos and your normal photos in two different folders. In this image mode, an icon is displayed in the upper right corner to determine whether the image can be used for DSA analysis.

## Wireless image data transmission via WiFi

This feature allows you to send photos from your smartphone to the Programat furnace easily and conveniently using wireless transmission. You only need a WiFi connection.

## Additional functions

- Diagnosis function for reading diagnostic data
- Messenger function for notifications

Download the app from the App Store to your smartphone free of charge. You will be impressed by its easy operation. Compatible with Programat P310/P510, starting with software version V2.1 and with Programat EP 3010/EP 5010, starting with version V1.1

The following systems are supported: iOS\*, Android\*
